

Alarm Check Valve 8" Model H-1 Flange / Flange 8" Model H-3 Flange / Groove

DESCRIPTION AND OPERATION

The Globe Model H-I and H-3 8" Alarm Check Valves are used in wet pipe fire sprinkler systems. They primarily serve a dual purpose in that they prevent a reverse flow of water through their bodies (non-return) and also provide for the use of a hydraulic fire alarm which is not dependent upon an electrical power supply for its operation. Through the use of a hydraulic retard chamber a time delay is provided to eliminate potential false alarms caused by fluctuating water supply pressures. Where constant pressure water supplies are used the retard chamber (time delay) is not necessary. By incorporating the use of electrical pressure switches, other supplemental alarms, annunciators etc. may also be used.

Globe 8" Model H-I and H-3 Alarm Check Valves may be installed in the vertical position and trim can be provided for both variable and constant water supply pressures.

The body of the Alarm Check Valve is constructed of high tensile strength cast iron having considerable ductility to reduce damage in field handling.

All interior operating parts are machined from highly corrosive-resistant alloys, each having high strength and good wear resistance.

Rubber parts are of selective materials which have good abrasive resistance and long life expectancy in terms of resiliency.

TECHNICAL DATA

- Water Working Pressure Rating 175 psi (12 bars).
- Factory tested hydrostatically to 350 psi (24 bars).
- Equivalent feet of pipe: 8" Valve = 21 feet.

PHYSICAL DATA	MODEL	
	H-1	H-3
Overall Length	13 7/8"	15 1/8"
Weight of Valve Complete with Vertical Variable Pressure Trimmings	150 lbs. 200 lbs.	30 lbs. 80 lbs.
