Model CC2 — 4.2 and 5.6 K-factor Combustible Concealed Space Sprinklers™ Specific Application, Upright

General Description

The Tyco® Model CC2 Combustible Concealed Sprinklers are fast response, upright specific application sprinklers designed to provide protection of specific light hazard combustible, as well as non-combustible, concealed spaces requiring sprinkler protection. The CC2 Sprinklers comply with the criterion for the protection of combustible concealed spaces as described in NFPA 13.

The Model CC2 Sprinklers are designed for installation on BlazeMaster® CPVC wet pipe systems and steel wet pipe or dry pipe sprinkler systems (refer to the respective Design Criteria sections). They provide the following features as compared to the 2.8 K-factor Model CC1 Sprinklers described on Technical Data Sheet TFP630:

- Can be used on steel dry pipe sprinkler systems.
- Increased spacing from 10 ft. (3,1 m) to 12 ft. (3,7 m).
- Increased coverage area from 100 ft² (9,3 m²) to 144 ft² (13,4 m²).

The effectiveness of the Model CC2 Sprinklers in combustible concealed spaces was clearly evident during the full scale fire testing for this product.

IMPORTANT

Always refer to Technical Data Sheet TFP700 for the "INSTALLER WARNING" that provides cautions with respect to handling and installation of sprinkler systems and components. Improper handling and installation can permanently damage a sprinkler system or its components and cause the sprinkler to fail to operate in a fire situation or cause it to operate prematurely.

Concealed spaces between floors, as well as low pitch attics (slope of 2:12 or less) are inherently shallow. Standard spray sprinklers, by design, have an umbrella like spray pattern that poses a difficult challenge when trying to achieve effective coverage within a shallow space. The Model CC2 Combustible Concealed Space Sprinklers have addressed the difficult "above ceiling" fire challenge for both wet pipe and dry pipe sprinkler systems.

WARNING

The Model CC2 Combustible Concealed Sprinklers described herein must be installed and maintained in compliance with this document, as well as with the applicable standards of the National Fire Protection Association, in addition to the standards of any other authorities having jurisdiction. Failure to do so may impair the performance of these devices.

The owner is responsible for maintaining their fire protection system and devices in proper operating condition. The installing contractor or manufacturer should be contacted with any questions.

Sprinkler Identification Number

TY2189 - Upright, 4.2 K TY3189 - Upright, 5.6 K

Technical Data

Approvals

UL Listed.

(Listings and approvals only apply to the service conditions indicated in the Design Criteria sections.)

Maximum Working Pressure 175 psi (12,1 bar)

Pipe Thread Connection 1/2 inch NPT or ISO 7-R3/4

Discharge Coefficient

 $K = 4.2 \text{ GPM/psi}^{1/2}$ (60,5 LPM/bar^{1/2}) $K = 5.6 \text{ GPM/psi}^{1/2}$

(80,6 LPM/bar^{1/2})

Temperature Rating 175°F/79°C

Finish

Natural Brass

Page 2 of 8 TFP632

Operation

The glass bulb contains a fluid that expands when exposed to heat. When the rated temperature is reached, the fluid expands sufficiently to shatter the glass bulb allowing the sprinkler to activate and flow water.

Design Criteria

Design criteria is provided as follows

- 175°F/79°C, Model CC2 Combustible Concealed Sprinklers with CPVC Pipe and horizontal slope above sprinklers not exceeding 2:12 (Refer to Page 2).
- 175°F/79°C, Model CC2 Combustible Concealed Sprinklers with Steel Pipe and horizontal slope above sprinklers not exceeding 2:12 (Refer to Page 3).

CPVC Pipe

CC2 Temperature Rating (CPVC Pipe): 175°F/79°C

Area Of Use (CPVC Pipe):

Horizontal (slope not exceeding 2:12) combustible concealed spaces of

- Wood truss construction or bar joist construction (Fig. 2).
- Non-combustible insulation filled solid wood or composite wood joist construction (Fig. 3).

NOTE

In order to be considered "non-combustible insulation filled solid wood or composite wood joist construction", the insulation (including insulation provided with a combustible vapor barrier), must completely fill the pockets between the joists to the bottom of the joists, and the insulation must be secured in place with metal wire netting. The metal wire netting is intended to hold the insulation in place should the insulation become wetted by the operation of the CC2 Sprinklers in the event of a fire.

Concealed Space Area (CPVC Pipe):

The area of the concealed space is not limited; however, for both Fig. 2 and Fig. 3, where CPVC pipe is being utilized, draft-curtains or full height walls must be provided at 1000 ft² (93 m²) areas. This draft curtain shall be at least 1/3 the depth of the concealed space or 8 inches (200 mm), whichever is greater, and be constructed using a material that will not allow heat to escape through or above the draft curtain.

Concealed Space Size (CPVC Pipe): The depth of the concealed space is 36 inches (915 mm) maximum to 12 inches (305 mm) minimum.

System Type (CPVC Pipe): Light hazard, wet pipe system.

Minimum Distance Between CC2 Sprinklers (CPVC Pipe):

7 feet (2,1 m). Minimum spacing does not apply to any additional sprinklers required for protection of BlazeMaster CPVC that is offset over an obstruction

Maximum Distance Between CC2 Sprinklers (CPVC Pipe):

12 feet (3,7 m).

Maximum Coverage Area (CPVC Pipe):

144 ft² (13,4 m²).

Deflector Position (CPVC Pipe):

1-1/2 to 4 inches (40 to 100 mm) below upper deck for wood truss construction or bar joist construction (Fig. 2).

1-1/2 to 4 inches (40 to 100 mm) below

solid wood or composite wood joists (Fig. 3).

Minimum Distance Away From Trusses (CPVC Pipe):

4-1/2 inches (114 mm).

Remote Area (CPVC Pipe):

The remote area is 1000 ft² (93 m²).

The remote area does not include any additional sprinklers required for protection of BlazeMaster CPVC that is offset over an obstruction.

Required Density (CPVC Pipe):

0.10 gpm/ft² (4,1 mm/min).

Minimum Operating Pressure (CPVC Pipe):

7 psi (0,48 bar).

Note: The minimum resulting flow for the 4.2 K is 11.1 GPM, and the minimum resulting flow for the 5.6K is 14.8 GPM. Therefore, for coverage areas less than the maximum permitted coverage area of 144 ft², the 4.2K may provide a hydraulic advantage. The use of the CC1 sprinkler having a Kfactor of 2.8, minimum operating pressure of 10 psi, and resulting minimum flow of 9.5 GPM may provide a further hydraulic advantage for yet smaller coverage areas. The CC1 is described in Technical Data Sheet TFP630.

Obstructions (CPVC Pipe):

All obstruction criteria per NFPA for standard spray sprinklers apply (Ref. Figure 8), unless modified by this Technical Data Sheet.

Use Of UL Listed BlazeMaster CPVC Piping With Model CC2 Sprinklers:

Only BlazeMaster CPVC product may be used in concealed spaces requiring automatic sprinklers, when used in conjunction with Model CC2 Sprinklers. In order to use the BlazeMaster CPVC product for wood truss or bar ioist construction, the horizontal run of pipe must be a maximum of 6 Inches (150 mm) above the ceiling or noncombustible ceiling insulation, or 1/3 the depth of concealed space (as measured from the top surface of the ceiling to the bottom of the deck above), whichever is smaller (Fig. 2). For insulation filled solid wood or composite wood joist construction, the horizontal run of pipe must be a maximum of 6 Inches (150 mm) above ceiling or non-combustible ceiling insulation, or 1/3 the depth of concealed space (as measured from the top surface of the ceiling to the bottom surface of the joist insulation above), whichever is smaller (Fig. 3). The CPVC piping can then be used to supply the Model CC2 Sprinklers, as well as the sprinklers below the ceiling. Unless modified by this Technical Data Sheet, all other guidelines of the

TFP632 Page 3 of 8

"BlazeMaster — Installation Instructions & Technical Manual" must be met. When using 1 inch (DN25) or larger pipe, a hanger must be located at the truss nearest a sprig for purposes of restraint. If using 3/4 inch (DN19) piping, all sprigs over 12 inches (305 mm) must be laterally braced using methods described in the NFPA standards.

Where the CPVC must be offset up and over an obstruction and the pipe exceeds the allowed horizontal positioning requirements specified above as well as shown in Figure 2 and 3, additional Model CC2 Sprinklers are to be installed as shown in Figure 2 and 3 to protect the BlazeMaster CPVC product.

A minimum lateral distance of 18 inches (460 mm) must be maintained between the CPVC pipe and heat pumps, fan motors, and heat lamps.

Steel Pipe

CC2 Temperature Rating (Steel Pipe): 175°F/79°C

Area Of Use (Steel Pipe): Horizontal (slope not exceeding 2:12) combustible concealed spaces of

- Wood truss construction or bar joist construction (Fig. 4).
- Solid wood joist construction (Fig. 5)
 where the upper deck and ceiling
 joists may have a maximum depth of
 12 inches (300 mm) and typical on
 center joist spacing of minimum 16
 inches (400 mm).
- Non-combustible insulation filled solid wood joist or wood composite joist construction (Fig. 6).

NOTE

In order to be considered "non-combustible insulation filled solid wood joist or composite wood joist construction", the insulation (including insulation provided with a combustible vapor barrier), must completely fill the pockets between the joists to the bottom of the joists, and the insulation must be secured in place with metal wire netting. The metal wire netting is intended to hold the insulation in place should the insulation become wetted by the operation of the CC2 Sprinklers in the event of a fire.

Concealed Space Area (Steel Pipe): The area of the concealed space is not limited; however,

 for wood truss construction or concealed spaces of non-combustible bar joist construction (Fig. 4) draftcurtains or full height walls must be provided at 1000 ft² (93 m²) areas. This draft curtain shall be at least 1/3 the depth of the concealed space or 8 inches (200 mm), whichever is greater, and be constructed using a material that will not allow heat to escape through or above the draft curtain.

for solid wood joist construction (Fig. 5), blocking must be provided in each upper deck and ceiling joist channel at a maximum 32 feet (9,75 m) intervals. This blocking shall be installed to the full depth of the joists and be installed so as to not allow heat to escape through or above the blocking. The blocking must be constructed using a non-combustible material or the joist construction material.

Draft curtains must protrude below the joist a minimum of 6 inches (150 mm) or 1/3 the space, whichever is greatest and run parallel with the joist spaced at 31 feet (9,4 m) width maximum of 1000 ft² (93 m²). The draft curtain may be constructed of 1/4 inch (6,4 mm) plywood to prevent heat from escaping beyond the area.

 for non-combustible insulation filled solid wood joist or composite wood joist construction (Fig. 6), the requirement for draft curtains or blocking does not apply.

Concealed Space Size (Steel Pipe): The minimum and maximum concealed space depth is as follows:

For wood truss construction or concealed spaces of non-combustible bar joist construction (Fig. 4) the depth of the concealed space is 36 inches (915 mm) maximum to 12 inches (305 mm) minimum.

For solid wood joist construction (Fig. 5) or for non-combustible insulation filled solid wood or composite wood joist construction (Fig. 6), the maximum depth of the concealed space is 54 inches (1372 mm) from bottom of upper deck to top of ceiling, and the minimum depth is 6 inches (150 mm) from the bottom of the upper deck joists to the top of the ceiling joists.

System Type (Steel Pipe):

Light hazard, wet or dry pipe system using steel pipe.

NOTES

Use of the 4.2 K sprinklers in dry pipe systems is permitted by section 8.3.4.3 of NFPA 13 (2007 edition) where piping is corrosion resistant or internally galvanized.

Minimum Distance Between CC2 Sprinklers (Steel Pipe): 7 feet (2,1 m).

Maximum Distance Between CC2 Sprinklers (Steel Pipe): 12 feet (3,7 m)

Maximum Coverage Area (Steel Pipe):

144 ft² (13,4 m²).

Deflector Position (Steel Pipe):

1-1/2 to 4 inches (40 to 100 mm) below upper deck for wood truss construction or concealed spaces of non-combustible bar joist construction (Fig. 4).

1-1/2 to 2 inches (40 to 50 mm) below solid wood joists (Fig. 5).

1-1/2 to 4 inches (40 to 100 mm) below non-combustible insulation filled solid wood joists or composite wood joists (Fig. 6).

Remote Area (Steel Pipe):

The remote area for wood truss construction or bar joist construction (Fig. 4) or solid wood joist construction (Fig. 5) is 1000 ft² (93 m²) for wet pipe systems or 1300 ft² (121 m²) for dry pipe systems.

The remote area for non-combustible insulation filled solid wood joist or wood composite joist construction (Fig. 6) is to be calculated per the requirements of NFPA 13.

Required Density (Steel Pipe):

 $0.10 \text{ gpm/ft}^2 (4,1 \text{ mm/min})$

Minimum Operating Pressure (Steel Pipe):

7 psi (0,48 bar).

Note: The minimum resulting flow for the 4.2 K is 11.1 GPM, and the minimum resulting flow for the 5.6K is 14.8 GPM. Therefore, for coverage areas less than the maximum permitted coverage area of 144 ft², the 4.2K may provide a hydraulic advantage. The use of the CC1 sprinkler having a K-factor of 2.8, minimum operating pressure of 10 psi, and resulting minimum flow of 9.5 GPM may provide a further hydraulic advantage for yet smaller coverage areas when designing wet pipe systems. The CC1 is described in Technical Data Sheet TFP630.

Obstructions (Steel Pipe):

All obstruction criteria per NFPA for standard spray sprinklers apply (Ref. Figure 8), unless modified by this Technical Data Sheet.

Page 4 of 8 TFP632

TFP632 Page 5 of 8

Page 6 of 8 TFP632

Installation

The Model CC2 Sprinklers must be installed in accordance with the following instructions:

NOTES

The CC2 Sprinklers are to be installed upright and with their frame arms (ref. Figure 2, 3, 4, 5, or 6 as applicable) in-line with the pipe run.

Do not install any bulb type sprinkler if the bulb is cracked or there is a loss of liquid from the bulb. With the sprinkler held horizontally, a small air bubble should be present. The diameter of the air bubble is approximately 1/16 inch (1,6 mm) for the 175°F/79°C temperature rating.

A leak tight 1/2 inch NPT sprinkler joint should be obtained with a torque of 7 to 14 ft.lbs. (9,5 to 19,0 Nm). A maximum of 20 ft.lbs. (28,5 Nm) of torque is to be used to install sprinklers. Higher levels of torque may distort the sprinkler inlet with consequent leakage or impairment of the sprinkler.

The Model CC2 Sprinklers must only be installed in the upright position with the deflector parallel to the upper deck. With pipe thread sealant applied to the pipe threads, use only the W-

Type 6 (End A) Sprinkler Wrench (Figure 7) for installation of the Model CC2 Sprinklers by applying the wrench to the sprinkler wrench flats only.

TFP632 Page 7 of 8

Care and Maintenance

The Model CC2 Sprinklers must be maintained and serviced in accordance with the following instructions:

NOTE

Before closing a fire protection system main control valve for maintenance work on the fire protection system that it controls, permission to shut down the affected fire protection systems must be obtained from the proper authorities and all personnel who may be affected by this action must be notified.

Sprinklers that are found to be leaking or exhibiting visible signs of corrosion must be replaced.

Automatic sprinklers must never be painted, plated, coated, or otherwise altered after leaving the factory. Modified sprinklers must be replaced. Sprinklers that have been exposed to corrosive products of combustion, but have not operated, should be replaced if they cannot be completely cleaned by wiping the sprinkler with a cloth or by brushing it with a soft bristle brush.

Care must be exercised to avoid damage to the sprinklers - before, during, and after installation. Sprinklers damaged by dropping, striking, wrench twist/slippage, or the like, must be replaced. Also, replace any sprinkler that has a cracked bulb or that has lost liquid from its bulb. (Ref. Installation Section).

The owner is responsible for the inspection, testing, and maintenance of their fire protection system and devices in compliance with this document, as well as with the applicable standards of the National Fire Protection Association (e.g., NFPA 25), in addition to the standards of any other authorities having jurisdiction. The installing contractor or sprinkler manufacturer should be contacted relative to any questions.

It is recommended that automatic sprinkler systems be inspected, tested, and maintained by a qualified Inspection Service in accordance with local requirements and/or national codes.

Limited Warranty

Products manufactured by Tyco Fire & Building Products (TFBP) are warranted solely to the original Buyer for ten (10) years against defects in material and workmanship when paid for and properly installed and maintained under normal use and service. This warranty will expire ten (10) years from date of shipment by TFBP. No warranty is given for products or components manufactured by companies not affiliated by ownership with TFBP or for products and components which have been subject to misuse, improper installation, corrosion, or which have not been installed, maintained, modified or repaired in accordance with applicable Standards of the National Fire Protection Association, and/or the standards of any other Authorities Having Jurisdiction. Materials found by TFBP to be defective shall be either repaired or replaced, at TFBP's sole option. TFBP neither assumes, nor authorizes any person to assume for it, any other obligation in connection with the sale of products or parts of products. TFBP shall not be responsible for sprinkler system design errors or inaccurate or incomplete information supplied by Buyer or Buyer's representatives.

In no event shall TFBP be liable, in contract, tort, strict liability or under any other legal theory, for incidental, indirect, special or consequential damages, including but not limited to labor charges, regardless of whether TFBP was informed about the possibility of such damages, and in no event shall TFBP's liability exceed an amount equal to the sales price.

The foregoing warranty is made in lieu of any and all other warranties, express or implied, including warranties of merchantability and fitness for a particular purpose.

This limited warranty sets forth the exclusive remedy for claims based on failure of or defect in products, materials or components, whether the claim is made in contract, tort, strict liability or any other legal theory.

This warranty will apply to the full extent permitted by law. The invalidity, in whole or part, of any portion of this warranty will not affect the remainder.

Ordering Procedure

Contact your local distributor for availability.
